There was, as there has been for some time, the old bear story that business was bad. That was only a story. Against this were the figures of bank clearings this week, which bear the figures of bank clearings this week, which of pana clearings this week, which showed an increase in every important center except Boston. The bank statement showed an increase in leans of \$10,000,000 and a decrease in surplus reserve of \$3,000,000. This was better than had been expected.

In well advised circles the opinion s expressed that the market may be dull for some time to come or at least intil such time as theh threat of adwill shortly be devoting more time to "getling their fonces in order" 'han to other things. It must also be recognized that a change has passed over the spirit of Washington in that there is no longer a tendency to indict a man or a group of men because they have a few dollars just now. The more radical are inclined to ask "how he got it," and in this connection it probably will be realized in time that congress is investigating "water that has passed over the dam." shortly be devoting more time to water that has passed over the dam."

Warning Against Brown Tail Moth

Posted Conspicuously. Posted in a conspicuous place in the waiting room of the Yantic station is the following warning pertaining to the brown tall moth:

Damage—It is a serious pest, the enterpliars feeding upon many different kinds of follage, but showing a preference for pear, apple, cherry, plum, oak, elm, maple, etc.

It is annoying to human beings be-cause the lars of th ecaterpillars, which break off and blow about in the air, come in contast with the human skin, causing an intense itching and skin, causing an intense itching and rash, very serious with some persons.

Life Cycle—The eggs are laid in masses containing from 200 to 400 eggs, each, on a leaf in July. From 15 to 20 days are requiredfor hatching. The young caterpillars feed upon the leaves until September, when they draw together a number of leaves and with the silk which they spin make a nest, in which to apend the winter. In the spring they devour the new fallage and become full grown about the 20th of June. The cocoons are then formed the spring they devour the new faliage and become full grown about the 20th of June. The cocoons are then formed in the folded leaves and two weeks later the adult moths appear. Both sexes are white, with brown at the end of the abdomen, and fly at night.

Remedies.—Cutting off and burnins the nests in winter, trapping the adults at electric lights in July and spraying the foliage with lead arsenate, three to fiftye pounds in fifty gallons of water, are the best remedies.

Caution.—It is a violation of the law to transport living specimens. Chapter 114, Section 8, Public Acis, of 1907).

GOLD DUST

# is a Declaration of Independence

The woman who is independent does her house work in the quickest, easiest way. The use of Gold Dust points that way. The Gold Dust way is also the most thorough way. Gold Dust attacks grease and dirt, and drives it away with little effort on your part. It does all the hard part of the work, with the aid of your brains instead of your musc le.

If every home in this land used Gold Dust for all the purposes for which it is the best cleaner, there would be more independence among American housewives.

Sign your Declaration of Independence today by ordering a package of Gold Dust from your grocer!
